FAST PLASMA ELECTRON

9-SEC/18-SEC ELECTRON MOMENTS (N,V,T,H)

77-102A-02D

This data set consists of 1 magnetic tape. The tape is VAX labeled (ISEE1) in ASCII followed by a BINARY data file and a ASCII trailer file, 6250 bpi, 9 track, with 5 data files, created on the VAX 8810 computer using the DCL COPY command to copy the files from disk to tape. The C tape is on a 6250 magnetic tape, labeled NL. This tape replaces the data on D-82766-805 and C-27954-993. These 40 D and C tapes were released. The D and C numbers and the time spans are as follows:

D#	C#	DATA FILES	LABEL	TIME SPAN
D-87472	C-29384	2	ISEE1	10/29/77 - 01/18/78
		5		01/25/78 - 03/12/78
		8		04/11/78 - 06/11/78
		11		07/01/78 - 10/02/78
		14		10/03/78 - 12/31/78

Ralph,

We have recently received from Frank Ottens a replacement dataset for Ogilvie's ISEE-1 data. Currently his last data submission is archived as 77-102A-02D, "12-SEC ELECTRON PARAMETERS" and consists of 40 tapes. We never got any documentation from them for those tapes. These 40 tapes can now be released.

Frank has now provided one tape which has reprocessed data for the same time period. (The old tapes apparently had a number of parameters which were not very useful and the format was also not very useful). He has also provided with this one tape a page describing the data format and a description of the parameters.

I suggest that we re-use the same data set ID number (-02D) and replace the old 40 tapes with this one tape, and change the name of the data set as indicated below.

Sumant

Documentation for NSSDC data set 77-102A-02D
(9s/18s Electron Moments)
From ISEE-1 Vector Electron Spectrometer (PI: K.W. Ogilvie, GSFC)

The enclosed tape was created on the NASA/GSFC Laboratory For Extraterrestrial Physics' (LEP) VAX 8810 computer using the DCL COPY command to copy the files from disk to tape. The tape you are receiving is a labelled tape (label = ISEE1), written at a density of 6250 and should be mounted with a blocksize of 30720. The tape contains 5 files as follows:

FOR016_77301_78017.DAT
FOR016_78024_78070.DAT
FOR016_78100_78161.DAT
FOR016_78181_78274.DAT
FOR016_78275_78364.DAT

Each record consists of 20 words, three of which are integer, and 17 real. The information contained on each record is as follows:

Word 1	INTEGER*4	year
Word 2	INTEGER*4	decimal day (Jan 1 = day 0)
Word 3	INTEGER*4	millisecs of day
Word 4	REAL*4	geocentric radius of s/c location
Word 5	REAL*4	gse x
Word 6	REAL*4	gse y
Word 7	REAL*4	gse z
Word 8	REAL*4	electron density (el/cm cm cm)
Word 9	REAL*4	electron temperature (degrees K) $= (T_{\parallel} + 2T_{\perp})/3$
Word 10	REAL*4	parallel to perpendicular temperature anisotropy
Word 11	REAL*4	bulk flow ux (gse, cm/sec)
Word 12	REAL*4	bulk flow uy (gse, cm/sec)
Word 13	REAL*4	bulk flow uz (gse, cm/sec)
Word 14	REAL*4	heat flux hx (gse, ergs/cm cm /sec)
Word 15	REAL*4	heat flux hy (gse, ergs/cm cm /sec)
Word 16	REAL*4	heat flux hz (gse, ergs/cm cm /sec)
Word 17	REAL*4	data pool tape 64 sec mag field bx (gse, nT)
Word 18	REAL*4	data pool tape 64 sec mag field by (gse, nT)
Word 19	REAL*4	data pool tape 64 sec mag field bz (gse, nT)
Word 20	REAL*4	s/c potential (elec volts)

****
NOTE:

Time corresponds to the start of collection, i.e. the start of the spin. Time between records will be approx 9.12 sec or 18.24 sec depending on the bit rate. This is becuse although data are collected over a single spin (3 sec), data are then read out over multiple spins.

Because our data reads out more often than the magnetic field data used, i.e. 64 sec for the magnetic field, vs. approx 9.12 or 18.24 sec for our data,the same magnetic field record was used multiple times. No interpolation was done on the magnetic field record.

Under certain conditions some of the above should not be used. Magnetic Field bx, by, bz values of -0.1E+10 should be skipped, as should any 0.0 readouts, and readouts equal to 1.7E36 or -1.7E36.

If questions arise, please contact Franklin Ottens (301-286-6674), or Richard Fitzenreiter (301-286-6825).
