---

1. INTRODUCTION:

The documentation for this data set was originally on paper, kept in NSSDC's Data Set Catalogs (DSCs). The paper documentation in the Data Set Catalogs have been made into digital images, and then collected into a single PDF file for each Data Set Catalog. The inventory information in these DSCs is current as of July 1, 2004. This inventory information is now no longer maintained in the DSCs, but is now managed in the inventory part of the NSSDC information system. The information existing in the DSCs is now not needed for locating the data files, but we did not remove that inventory information.

The offline tape datasets have now been migrated from the original magnetic tape to Archival Information Packages (AIP's).

A prior restoration may have been done on data sets, if a requestor of this data set has questions; they should send an inquiry to the request office to see if additional information exists.

2. ERRATA/CHANGE LOG:

NOTE: Changes are made in a text box, and will show up that way when displayed on screen with a PDF reader.

When printing, special settings may be required to make the text box appear on the printed output.

16 SECOND UA ATOMSPHERIC DATA

THIS DATASET CONSISTS OF 1 6250 BPI, VAX LABELED WRITTEN TAPE. THE LABEL NAME IS "DEUAOA", AND SHOULD BE MOUNTED AS SUCH. THE TAPE HAS BEEN RESTORED FROM ITS ORIGINAL BACKUP FORMAT. A DIRECTORY LISTING OF THE TAPE HAVE BEEN INCLUDED IN THE DATASET CATALOG.

Total of 556 files.

UA tape for DE on a vax

This is a system of files and subroutines to read atmospheric data and corresponding orbit data at 16 second intervals. The tape contains the UA files (DEUAyyddd.DAT), read routines for the files (UROPEN.FOR,UREAD.FOR), a catalog of UA data (DEUACAT.DAT), orbit data (OABASE.DAT), and a read routine for the orbit data (OAREAD.FOR).

Format of VAX version of UA files for DE

Files are written unformatted with a file for each days data and the record length (fixed for any given day) depending on the available data.

File names are of the form DEUAYYDDD.DAT where YY is the last two digits of the year (19YY) and DDD is the day count (Jan 1 = 1).

Word	First Record	Other Records
1	NW*100000+YYDDD (integer)	Time (integer millisec)
2	Word code 1 (integer)	Data for code 1 (real)
3	" " 2 "	" " " 2 "
|		
|		
NW+1	" " NW "	" " " NW "

The integer codes for currently available data are:

1 NACS N2
2 NACS O
3 NACS HE
4 NACS AR
5 NACS N
6 WATS TN
7 WATS NVE
8 WATS NVU
9 LANG NP
10 LANG TE
11 FPI FWAV
12 FPI FALT
13 FPI FVN
14 FPI FTEM
15 FPI RAY
16 RPA TI
17 RPA NI
18 RPA IVE
19 RPA IVN
20 RPA IVU

File DEUACAT.DAT contains a list of days and geophysical data (code numbers) available on that day (TYPE DEUACAT.DAT).

Two subroutines are available to aid in accessing the UA data. They use I/O unit numbers in the range 91 to 99. The logical SYS$UA must be ASSIGNED to the directory containing the DEUAyyddd.DAT files.

Initiate read operations.

```
CALL UROPEN(FDATE,FTIME,IERR,MAP)

 Input parameters:
  FDATE - First date (YYDDD) for data (INTEGER).
  FTIME - First time (Millisec) for data (INTEGER).
  MAP   - array containing number of data items to be
          retrieved plus list of the data item code numbers.

 Output parameters:
  IERR - Error return:
         3XX Open error with XX VAX error code;
         800 No data within 20 days of request;
         900 No further data.
```

Read sequentially.

```
CALL UREAD(IDATE,ITIME,IERR,DATA)

 Output parameters:
  IDATE - Date of data (YYDDD).
  ITIME - Time of data (Millisec).
  IERR  - Error return:
          3XX Open error with XX VAX error code;
          400  Read error;
          800 No data within 20 days of request;
          900 No further data.
  DATA  - Array of data according to map established
          in call to UROPEN.
```

Subroutine OAREAD is used to get orbit data. I/O unit 99 is used for reading. The logical SYS$OA should be ASSIGNED to the directory containing the file OABASE.DAT.

```
CALL OAREAD(IDATE,ITIME,IERR,MAP,DATA)

Input parameters:
  IDATE - Date of data (YYDDD).
  ITIME - Time of data (Millisec).
  MAP   - Array containing number of required parameters
          plus list of parameters
          13 Orbit number
          32 Altitude
          33 Latitude
          34 Longitude
          37 Local Solar Time
          38 Local Magnetic Time
          39 L Shell
          40 Invariant Latitude
          76 Solar Zenith Angle
Output parameters:
  IERR  - Error return from file open
    ierr = -20 means gap in data prevented interpolation (may not occur)
    ierr = -21 means read error from OABASE.DAT (probably
           trying to access non-existant record)
  DATA  - Array of data according to MAP
```

Example:

```
C       Example to read N2, He, O, and TN starting at day 82200 (two
C       hundreth day of 1982) and at 20000 sec plus altitude and latitude.
C       UREAD returns actual date and time of data.
