1. INTRODUCTION:

The documentation for this data set was originally on paper, kept in NSSDC's Data Set Catalogs (DSCs). The paper documentation in the Data Set Catalogs have been made into digital images, and then collected into a single PDF file for each Data Set Catalog. The inventory information in these DSCs is current as of July 1, 2004. This inventory information is now no longer maintained in the DSCs, but is now managed in the inventory part of the NSSDC information system. The information existing in the DSCs is now not needed for locating the data files, but we did not remove that inventory information.

The offline tape datasets have now been migrated from the original magnetic tape to Archival Information Packages (AIP's).

A prior restoration may have been done on data sets, if a requestor of this data set has questions; they should send an inquiry to the request office to see if additional information exists.

2. ERRATA/CHANGE LOG:

NOTE: Changes are made in a text box, and will show up that way when displayed on screen with a PDF reader.

When printing, special settings may be required to make the text box appear on the printed output.

SELECTED SOLAR FLARE IMAGE SERIES

80-014A-05B SOXR-00064

This data set consists of 45 round tapes in VAX/VMS backup format. The tapes are 6250 bpi, 9-track, multi-filed, and ascii. The day of the year is in the title of each file (filename = dddhhmm.???, where ddd = DOY number, hh = hours UT, mm = minutes UT, and ??? is a label; usually the initials of the file's creator) and the year is 1980. Section A is organized by file name and section B is organized by the D-number of the tape.

SELECTED SOLAR FLARE IMAGE SEQUENCES

This data set consists of solar flare image sequences which were selected as part of a project to produce 16mm movies of flares, by Dr. David Batchelor, an SMM Guest Investigator.
The complete set of solar flares observed with the HXIS instrument was considered, and events were selected in order of decreasing intensity as measured by total counts, starting with the largest.
All events occurred in 1980, and the DOY number is reflected in the name of each data file (filename = dddhhmm.???, where ddd = DOY number, hh = hours UT, mm = minutes UT, and ??? is a label; usually the initials of the file's creator).
The data files were stored in VAX VMS BACKUP format on tape.
These image sequences have been scanned for interference from radiation in the geospace environment, and images effected by interference have been deleted.
Approximately 200 flares are recorded in the files, sometimes more than one in a file because of repeated flaring of one active region or because more than one flaring active region was in the field of view.
Most of these flares are also available for study by viewing the 16mm movies; contact Dr. Batchelor or Dr. D. M. Rust at the Johns Hopkins University Applied Physics Laboratory.
