

## **CIPS Level 3b Data: Seasonal Daily Daisy Movies**

Last Updated May 2020

The CIPS level 3b data product consists of seasonal movies of the daily daisies. In contrast to the level 3a png files, the movies use a single color scale for all days so that they can be compared to one another. This color scale ranges from 0 to  $50 \times 10^{-6} \text{ sr}^{-1}$ . Thus variations in image brightness in the movies, whether from day to day or from season to season, represent real changes in PMC brightness.
