1. INTRODUCTION:

The documentation for this data set was originally on paper, kept in NSSDC's Data Set Catalogs (DSCs). The paper documentation in the Data Set Catalogs have been made into digital images, and then collected into a single PDF file for each Data Set Catalog. The inventory information in these DSCs is current as of July 1, 2004. This inventory information is now no longer maintained in the DSCs, but is now managed in the inventory part of the NSSDC information system. The information existing in the DSCs is now not needed for locating the data files, but we did not remove that inventory information.

The offline tape datasets have now been migrated from the original magnetic tape to Archival Information Packages (AIP's).

A prior restoration may have been done on data sets, if a requestor of this data set has questions; they should send an inquiry to the request office to see if additional information exists.

2. ERRATA/CHANGE LOG:

NOTE: Changes are made in a text box, and will show up that way when displayed on screen with a PDF reader.

When printing, special settings may be required to make the text box appear on the printed output.

HELIOS-B

HOURLY AVG COUNT RATE DATA

76-003A-07A **SPHE-00688**

This data set has been restored. There were originally two 9-track, 800, & 1600 BPI tapes written in ASCII. There is one restored tape. The DR tape is a 3480 cartridge and the DS tape is 9-track, 6250 BPI. The original tapes were created on a PDP computer and the restored tapes were created on an IBM 9021 computer. The DR and DS numbers along with the corresponding D numbers are as follows:

DR#	DS#	D#	FILES	TIME SPAN
-----	-----	-----	-----	-----
DR004820	DS004820	D047380 D066087	1 2	01/06/76 - 12/31/78 12/31/78 - 03/08/80

HELIOS-A

HOURLY AVG COUNT RATE DATA

74-097A-07A **SPHE-00691**

THIS DATA SET HAS BEEN RESTORED. THERE WERE ORIGINALLY FOUR 9-TRACK,
1600 BPI TAPES, WRITTEN IN ASCII. THERE IS ONE RESTORED TAPE. THE DR
TAPE IS A 3480 CARTRIDGE AND THE DS TAPE IS 9-TRACK, 6250 BPI. THE
ORIGINAL TAPES WERE CREATED ON AN IBM 360 COMPUTER AND THEY WERE
RESTORED ON AN IBM 9021 COMPUTER. THE DR AND DS NUMBERS ALONG WITH THE
CORRESPONDING D NUMBERS AND TIME SPANS ARE AS FOLLOWS:

DR#	DS#	D#	FILES	TIME SPAN
DR004810	DS004810	D047379	1	12/11/74 - 12/31/76
		D066084	2	01/01/77 - 12/31/79
		D066085	3	12/31/79 - 12/31/81
		D066086	4	12/31/81 - 12/31/83

74-079A-07A

76-003A-07A

This data set catalog consists of four tapes for Helios 1 data and two tapes for Helios 2 data. The D tapes are 800 BPI, ASCII, 9-track with one file of data and the C tapes are 1600 BPI, ASCII, 9-track with one file of data. The tapes were created on an DEC PDP 11/45 computer. The D and C numbers along with the time spans are as follows:

74-079A-07A

<u>D#</u>	<u>C#</u>	<u>TIME SPAN</u>
D-47379	C-22206	12/11/74 - 12/31/76

Tape Header Block Format

In column "Format" the FORTRAN Format convention is used. The PDP 11 word length is 16 bit, i.e. one word can accomodate 2 ASCII characters.

In column "Contents" the underline symbol "_" represents a space (ASCII-Code 40_{octal}).

Filler data are indicated by -9999.9, on the ASCII tape represented as
- 0.99999 E+04.

The acronyms for the rate channels are composed of a letter (P for protons, A for alpha particles and E for electrons) and an indication of the energy range in MeV/nucleon for protons and alpha particles resp. MeV for electrons.

The counting rates are given as particles/m² sec sr MeV/N, except for the integral channels P>51 and A>48 which are given as particles/m² sec sr.

The 1 hour averaging interval is sliding, i.e. it does not start and stop on the hour. This was made to accomodate the instrumental time resolution at low bit rates, where accumulation periodes can be as long as 43.2 minutes. Furthermore it can happen at low bit rates, that successive averaging intervals appear to overlap in time. This is caused by the fact that rate channels are accumulated on board the S/C in three different groups with different but overlapping start and stop times for the three accumulation periods. At low bit rates, when the length of the accumulation period is of the same order as the averaging interval, this overlap appears also in this data set. However, the rate channels, which are accumulated during a period other than the one indicated by "Start time of averaging interval" and "Stop time of averaging interval" are marked with filler data, so that for any given rate channel, there is no time overlap indeed.

Note that due to the measurement technique (range measurement) the energy boundaries for the electron channels E 0.2 - 0.8 and E 0.8 - 2 are only rough estimates.

HELIOS 2

HELIOS 2 PARTICLE E6_KUNOW

76-003A-07B -SPHE-00769

This dataset has been ingest to CD Write Once. The data was downloaded from /raid/ftp/spacecraft_data/Helios2/particelle/e6_kunow data is written in ASCII format. KD number along with the time spans and tape as follows:

KD#	TIME SPAN
KD023223	01/16/76 ~ 03/14/80

h-cr

BRIEF DESCRIPTION
Cosmic Ray Particles
(Principal Investigator: Kunow)

HELIOS-A and -B spacecrafts were the pair of deep space probes developed by the Federal Republic of Germany (FRG) in a cooperative program with NASA. The purpose of the mission was to make pioneering measurements of the interplanetary medium from the vicinity of the earth's orbit to 0.3 AU.

The objective of experiment (E6) was to study high-energy, charged, cosmic-ray particles of solar, planetary, and galactic origin in interplanetary space. Protons and alpha particles with energies >1.3 MeV/nucleon, and electrons >0.3 MeV were measured within interplanetary space over the range from 0.3 to 1.0 AU. The instrument, a particle telescope with 55-deg field of view, consisted of five semiconductor detectors, one sapphire Cherenkov counter, and one scintillation counter, all enclosed by an anticoincidence cylinder. The telescope was calibrated prior to launch using radioactive sources, particle accelerators, and ground-level muons. It measured protons and alpha particles in six channels (1.3-3.3, 3.3-13, 13-27, 27-37, 37-45, and >45 MeV/nucleon) and electrons in five energy channels (0.3-0.8, 0.8-2, 2-3, 3-4, and >4 MeV). For more detail see pp.253-257 of Raumfahrtforschung, v.19, n. 5, 1975.

The h-a-cr*.dat and h-b-cr*.dat files contains hourly averaged fluxes of electrons, protons and alpha particles in the MeV ranges. The files were written in ASCII-codes. Each record contains 10 hourly averages. The differential fluxes (particles/sq.m, s, sr, MeV) cover, in several bands, the energy range 0.3-2.0 Mev for electrons, 4.0-51 Mev for protons, and 2.0-48 Mev for alpha particles. Also provided are the integral fluxes of alphas above 48 Mev, and protons above 51 Mev. For some of the energy channels, the standard deviations of the averages are also provided. Each file is preceded by a header record, providing the start and stop times of the data in the file.

For h-a-cr*.dat files:

Time Coverage: 1974/12/11 - 1983/12/31

For h-b-cr*.dat files:

Time Coverage: 1976/01/16 - 1980/03/08
