# Data Analysis Enabled by the Space Physics Data Facility

Lan Jian, Robert Candey, Tamara Kovalick, and the Rest of SPDF Team

NASA Goddard Space Flight Center,

Greenbelt, MD, USA

https://spdf.gsfc.nasa.gov

Triennial Earth-Sun Summit (TESS) Dallas, TX April 10, 2024

## Introduction of SPDF

SPDF is the active and permanent archive of space physics data from NASA missions and joint missions with other US and foreign agencies (~3000 CDF datasets, ~5000 non-CDF datasets, ~100M files)

## **Science-Enabling Services of SPDF**

#### **Coordinated Data Analysis Web (CDAWeb)**

- Data access through web browser, IDL, Python, API
- Interface for browsing and plotting data from 60+ missions or mission groups (audio, movie) and multiple instruments
- Inventory plot and usage statistics for mission data

### □ Satellite Situation Center (SSC)

- ~200 spacecraft, orbit/ground track displays and queries
- Coordinate transformation

#### **OMNIWeb (including COHOWeb)**

- Solar wind plasma, magnetic field, and energetic particle data at the nose of Earth's bow shock and other locations of the heliosphere
- Interface for plotting, filtering, and simple analysis

60+ Missions/Sources (Groups) 🗪	<ul> <li>Select zero OR more Sources         <ul> <li>(default = All Sources if &gt;=1 Instrument</li> <li>Type is selected)</li> </ul> </li> </ul>	<ul> <li>Select zero OR m (default = All Instru Source is selected</li> </ul>	ore Instrument Types iment Types if >=1 )

#### **CDAS Web Service Client Code Examples**

The following web service client code examples demonstrates how to access data from the AEROCUBE-6-B DOSIMETER L2 dataset from particular programming environments.

#### Jupyter Notebook on Binder

The following link launches a Python Jupyter Notebook that demonstrates using the cdasws library to access <u>AEROCUBE-6-B DOSIMETER L2</u> data in a Jupyter Notebook. It is merely an example and does not show all the capabilities of the library. You should edit the code to suit your needs.

#### 😫 launch binder

#### cdasws Python Library

The following code demonstrates using the cdasws library to access <u>AEROCUBE-6-B DOSIMETER L2</u> data in Python. It is merely an example and does not show all the capabilities of the library. You should edit the code to suit your needs.

# Install these prerequisites once before executing	the example code:	
# Option 1.	edasws IDL Library	
# Install CDF from https://cdf.gsfc.nasa.gov/	cuasws IDE Library	
# pip install -U spacepy		
# pip install -U cdasws	The following code demonstrates using the cdasws library to access <u>AEROCUBE-6-B_DOSIMETER_L2</u> data in IDL. It is merely an example a	and does not show all the capabilities of the library. You
# Option 2.	should edit the code to suit your needs.	
# pip install -U xarray		
# pip install -U cdflib	compile ont idl2

### CDAWeb Data Explorer

- Time interval is automatically set by the last available day of the selected dataset(s)
- Remove spikes or filter coarse noise
- Plot data availability
- Adjust X and Y lengths for plotting
- Auto scale time axis for finding discrete bursts or events
- Overlay vector components of selected variables, or selected variables that are identical among multiple datasets
- Output a subset or a superset of datasets in CDF, ASCII/CSV, JSON
- Create audio and movie files for selected variables

Select start and stop times from which to GET or PLOT data:

Start time (YYYY/MM/DD HH:MM:SS.mmm): 2022/09/17 00:00:00.000

Stop time (YYYY/MM/DD HH:MM:SS.mmm): 2022/09/18 00:00:00.000

Compute uniformly spaced binned data for scalar/vector/spectrogram data (not available with noise filtering)

Use spike removal to filter data without binning (not available with noise filtering)(Warning: Experimental !!).

Select an activity:

) Data Availability Chart : Generate a chart showing when data is available for the selected data set(s) and time range (Select > 1day).

- Plot Data : select one or more variables from list below and press submit.
  - Also create PS and PDF best quality outputs (all plot types except images and plasmagrams). Many panels per dataset are allowed but <=4 panels optimal for standard Y-axis height and single page display.</p>
  - Use coarse noise filtering to remove values outside 3 deviations from mean of all values in the plotted time interval.
  - $\square$  Change the X-axis width for time-series and spectrogram PNG plots (NEW default=3).  $^{ heta}$
  - ceil Change the Y-axis height for time-series and spectrogram plots (NEW default=2). ceil
  - Autoscale time axis (useful for finding discrete bursts/events).
  - Combine all time-series and spectrogram plots, for all requested datasets, into one plot file.
  - Plot overlay options.
    - Overlay vector components of selected variables.
    - Overlay selected variables or variable components that are identical among the datasets chosen (Supported constellations: MMS, Van Allen Probes (RBSP), THEMIS, Cluster, and GOES).
- O List Data (ASCII/CSV): select one or more variables from list below and press submit. (Works best for < 31 days)
- O Download original files : press submit button to retrieve list of files. (Max. 200 days use HTTPS site for larger requests)
- $^{
  m >}$  Create V3.9 CDFs for download: select one or more variables from the list below and press submit.  $^{
  m >}$
- O Create audio files based on data from selected variables. *More information about audification.*

Note: <u>CDF patch</u> required for reading Version 3.9 CDFs in IDL or MATLAB. Get CDFX - IDL GUI plotting/listing toolkit software. To be used with either the daily or "created" CDF files available above.

Pressing the "Submit" button will spawn a new window/tab in order to support the new "Previous" and "Next" functions.

Submit Reset

# **Summary**

- SPDF archives and serves observational space physics data relevant to NASA heliophysics science objectives in order to promote correlative and collaborative research across discipline and mission boundaries
- > SPDF provides three main science-enabling services: CDAWeb, SSCWeb, and COHOWeb
- SPDF welcomes community feedback/input to improve our services
  - Updating the ISTP metadata standards
  - Serving research generated data and plots
  - Developing more interactive data explorer (e.g., making multi-dimensional data more digestible rather than depending on heavy usage of additional software packages)
