1. INTRODUCTION:

The documentation for this data set was originally on paper, kept in NSSDC's Data Set Catalogs (DSCs). The paper documentation in the Data Set Catalogs have been made into digital images, and then collected into a single PDF file for each Data Set Catalog. The inventory information in these DSCs is current as of July 1, 2004. This inventory information is now no longer maintained in the DSCs, but is now managed in the inventory part of the NSSDC information system. The information existing in the DSCs is now not needed for locating the data files, but we did not remove that inventory information.

The offline tape datasets have now been migrated from the original magnetic tape to Archival Information Packages (AIP's).

A prior restoration may have been done on data sets, if a requestor of this data set has questions; they should send an inquiry to the request office to see if additional information exists.

2. ERRATA/CHANGE LOG:

NOTE: Changes are made in a text box, and will show up that way when displayed on screen with a PDF reader.

When printing, special settings may be required to make the text box appear on the printed output.

Dear Joe:

I'm sorry it had to wait so long for detailed information on the
Explorer 35 data, but at last we've gotten everything together in
interpretable form. A few words of explanation regarding terminology may
be in order. As used in the tape format, "physical record" refers to
the information contained between inter-record gaps on the tape. Each
physical record is 120 48-bit words long.

The column labeled "Word Length" on the table containing detailed
data information refers to the length of the physical record in which a
particular word was found. The records are copied with corrected parity, and
those records having a length of 120 words are likely to have a very high
probability of trustworthy data. Records of any other length should
generally be discarded.

Sincerely,

C
Cerald B. Peters
