1. INTRODUCTION:

The documentation for this data set was originally on paper, kept in NSSDC's Data Set Catalogs (DSCs). The paper documentation in the Data Set Catalogs have been made into digital images, and then collected into a single PDF file for each Data Set Catalog. The inventory information in these DSCs is current as of July 1, 2004. This inventory information is now no longer maintained in the DSCs, but is now managed in the inventory part of the NSSDC information system. The information existing in the DSCs is now not needed for locating the data files, but we did not remove that inventory information.

The offline tape datasets have now been migrated from the original magnetic tape to Archival Information Packages (AIP's).

A prior restoration may have been done on data sets, if a requestor of this data set has questions; they should send an inquiry to the request office to see if additional information exists.

2. ERRATA/CHANGE LOG:

NOTE: Changes are made in a text box, and will show up that way when displayed on screen with a PDF reader.

When printing, special settings may be required to make the text box appear on the printed output.

EXPERIMENT-21, OGO-5, Merged Tape Description

The final merged tapes for this experiment each contain 1 orbit of experimental data and selected attitude/orbit information. The tapes are written at 556 BPI, 7 track, odd parity and are in IBM 7094 format. All words are 36 bits long.

Each tape contains 1 file of information consisting of 1 22-word orbit information record, 1 78-word attitude/orbit data record containing parameters for start of orbit (ascending node) and approximately 3750 438-word records each containing 78 words of attitude/orbit data at one minute intervals and 360 words of experimental data at one second intervals.

The experimental data is not calibrated, but is stored in data number form. Calibration is applied at the time of data display so that problems normally resulting from calibration refinements are simplified. Digitized calibration curves are available for use upon request.

The detailed contents of each record are described below:

More complete descriptions of the parameters are available in the Data Processing Plan for CGO-E.

C. Merged data records - 430 55-622 words

Words 1-78 are exactly as those detailed in B above with each record now corresponding to times occurring on even minutes and at 1 minute intervals.

Words 79-258 contain channel A data words

Words 259-430 contain channel B data words

The experimental data consists of three word groupings containing the integer day number in the first word, integer seconds of day in the second word and the experimental readings in the third word. The range of data is 0-255 in data numbers (0-277₃) with 4000₉ used to indicate lack of data. The first word of the group of 180 corresponds to the time given in words 1 and 2 of the record and each succeeding word at 1 second time intervals.
