1. INTRODUCTION:

The documentation for this data set was originally on paper, kept in NSSDC's Data Set Catalogs (DSCs). The paper documentation in the Data Set Catalogs have been made into digital images, and then collected into a single PDF file for each Data Set Catalog. The inventory information in these DSCs is current as of July 1, 2004. This inventory information is now no longer maintained in the DSCs, but is now managed in the inventory part of the NSSDC information system. The information existing in the DSCs is now not needed for locating the data files, but we did not remove that inventory information.

The offline tape datasets have now been migrated from the original magnetic tape to Archival Information Packages (AIP's).

A prior restoration may have been done on data sets, if a requestor of this data set has questions; they should send an inquiry to the request office to see if additional information exists.

2. ERRATA/CHANGE LOG:

NOTE: Changes are made in a text box, and will show up that way when displayed on screen with a PDF reader.

When printing, special settings may be required to make the text box appear on the printed output.

360/91 POGO MAGNETIC FIELD TAPE FORMAT

Data Tape: 9 Track Binary, Fortran Generated, Standard Labelled,
Density = 1600 BPI

Data Record: 7294 Bytes/1823 1/2 words

Sample Read: Dimension B(1820)
Integer*2 IVAR

```

      Read(10, END = 100) MJD, ITMBAS, DELTAT, B, IVAR
      NMPTS = 1820-IVAR
      DO 50 IPT = 1, NMPTS
      INCR = (IPT-1) *DELTAT + 0.5
      ITIME = ITMBAS + INCR
      BVAL = B(IPT)

```

50 continue

Comments: In the sample read above, NMPTS is the number of scalar field values in the sample record, MJD is the modified julian day for the first field value in the sample record, ITIME is the time in milliseconds on modified julian day number MJD of the IPT 'th data value, BVAL is the IPT'th field value in the record, and DELTAT is the floating point difference in milliseconds between successive field values. See the following data record description.

Data Record Description:

Word No.	Description	Format	Comments
1	modified julian day of 1st data point in record	INTEGER*4	The modified julian day number of a given day is obtained by linearly counting, using 15019 as the base day number for January 0, 1900. See attached sheet for examples.
2	time in milliseconds (on the modified julian day number in word 1) of the 1st data value in record	INTEGER*4	e.g. NOON = 43200000
3	difference in milliseconds between successive data values in record	REAL*4	normally equals 500.0 or 1000.0 for OGO D

Word No.	Description	Format	Comments
4-1823	1820 data values	REAL*4	0.0 denotes padded data value
1824	half word variable denoting number of padded data values at end of data record	INTEGER*2	i.e. number of values in record = 1820 minus this 1/2-word

Tape Description: Successive records on these tapes are identical in format. 1820 magnetic field values are packed into each record. Floating point zeros indicate padded words. Each tape ends with one end of file.
