*Note: This tape had a crease near EOT, therefore an EOF mark was placed on the C-tape. Because of the EOF mark, one data file is missing on the C-tape, and the tape only includes 01/20/68 thru 01/31/68 the 22nd hour, instead of thru 01/31/68 the 24th hour.

Upon completing routine data set processing on the Ariel III,VLF Receiver Data (67-042A-05B), the following problem occured.

Sixteen tapes were duped and formats checked. One tape (D-01802) contained only eleven records of information. This information is the same information found on D-04906 of the same data set. Therefore, tape D-01802 should be released.
