## 1. INTRODUCTION:

The documentation for this data set was originally on paper, kept in NSSDC's Data Set Catalogs (DSCs). The paper documentation in the Data Set Catalogs have been made into digital images, and then collected into a single PDF file for each Data Set Catalog. The inventory information in these DSCs is current as of July 1, 2004. This inventory information is now no longer maintained in the DSCs, but is now managed in the inventory part of the NSSDC information system. The information existing in the DSCs is now not needed for locating the data files, but we did not remove that inventory information.

The offline tape datasets have now been migrated from the original magnetic tape to Archival Information Packages (AIP's).

A prior restoration may have been done on data sets, if a requestor of this data set has questions; they should send an inquiry to the request office to see if additional information exists.

2. ERRATA/CHANGE LOG:

NOTE: Changes are made in a text box, and will show up that way when displayed on screen with a PDF reader.

***When printing, special settings may be required to make the text box appear on the printed output.***

ESMR BRIGHTNESS TEMPERATURE TAPES

72-097A-04A

This data set consists of 103 9-track tapes. The data is stored in Binary at 6250 BPI. The tapes were created on IBM 360/75 and IBM 360/91 computers. The data set contains data from December 1972 through May 1977. Each tape has a CBT number as well as a D and C number. These numbers and the time spans for each follow:

ESMR Calib Brght Temp (CBT) Tapes
72-097A-04A

This data set contains brightness temperature data on binary tapes that were generated by IBM 360 computers. It consists of calibrated brightness temperatures measured at 19.35 GHz during each 4-s scan of the earth. Resolution is 25 x 25 km near nadir, degrading to 160 km cross-track by 45 km down-track at the ends of the scan. There is also information on geographic locations and time of observations. Each tape contains 16 days of data.

## 4.4 Data Processing, Format and Availability

### 4.4.1 Data Processing

All ESMR data will be acquired at the Rosman and Alaska data acquisition facilities and relayed to the MDHS at GSFC. MDHS will produce one Polaroid negative and positive of all ESMR data acquired from each interrogation orbit. MDHS will also produce and forward tapes containing raw ESMR data to LMES at GSFC. LMES will produce, from these tapes, calibrated brightness temperature tapes (CBTT).

### 4.4.2 Pictorial Format

The MDHS will produce a 4 inch x 5 inch Polaroid negative of all ESMR data acquired from an interrogation orbit. Six parallel strips of imagery and two geographic grids will be presented on each negative. Three strips and an adjacent grid will show one half of an orbit's data and, to the right, three strips with an adjacent grid will show the other half. Coverage in the first three strips of data will be identical but each strip will have a different dynamic range for its gray scale, with one presentation scheme corresponding roughly to 100-200°K, 190-270°K and 250-300°K. The other three strips of data will have the same format and cover the remainder of the orbit.

The exact ESMR image format schemes and selected ESMR imagery will be presented in the first Nimbus 5 Data Catalog.

### 4.4.3 Tape Format

The CBTTs produced by LMES will consist of the brightness temperature for each beam position, plus the earth location of each beam position and auxiliary data. There will be one file for each interrogation orbit.

Each logical record will consist of 1916 data words corresponding to 8 scans (32 seconds) of data. The format of this record is shown in Table 4-6.

### 4.4.4 Printout Format

Computer printouts of ESMR will give the complete radiometer data plus the satellite location at 16 second intervals. The printout format will be self-explanatory. Precision is needed in specifying the period to be covered by the data as one hour of data would fill about 30 pages of printout. A day's data would be a three inch stack of paper.

At present, the feasibility of producing grid print maps of ESMR (similar to THIR grid print maps) is being investigated. If producing these maps is feasible, their format will be described in the first Nimbus 5 Data Catalog after they become available.

### 4.4.5 Data Availability

All 4 inch x 5 inch ESMR Polaroid negatives will be optically reduced to 70 mm film format by the NADUC and forwarded to the NSSDC. Upon request, the NSSDC will furnish a user with either positive or negative ESMR photographic products. All ESMR photographic data will be listed in the Nimbus 5 Data Catalogs.

In the course of the research to be carried on at LMES, false color images of portions of the data will be produced. The facilities and personnel are not available for the processing of user requests for special productions.
