

Figure 1 displays a multi-panel plot showing time series data for eight channels (CH1 to CH8) and three summary statistics (STP, SC, TO, RES) over a 24-hour period. The x-axis represents time in hours, ranging from 0 to 24. The y-axis for each channel has a scale from 0 to 6. The channels show various patterns of activity, including noise, spikes, and sustained signals. The summary statistics (STP, SC, TO, RES) show a sharp increase around 16 hours, peaking at approximately 6.
