

Figure 1 displays a time series of 10 channels (CH1, CH2, CH3, CH4, CH5, CH6, CH7, STP, SC, TO, RES) over a 24-hour period. The x-axis represents time in hours, ranging from 0 to 24. The y-axis for each channel represents a signal level, with a scale from 0 to 6. The channels are stacked vertically. CH1 through CH7 show small, sharp spikes. STP shows a large, sustained peak around 15 hours. SC, TO, and RES show step-like changes, indicating discrete events or transitions.
